

## New Fat Removal Technology Custom Acoustic Liposuction (CAL)

### Performed While You're Awake in the Doctor's Office and It Tickles

---

San Antonio, Texas (March 31, 2010) – Dr. David J. Mozersky of ContourLase Body Institute in San Antonio, Texas offers patients the latest in fat removal liposuction technology – Tickle Lipo™ is performed while the patient is awake with very little to no pain. Some patients say it tickles.

According to Dr. Mozersky, *“The key feature of Tickle Lipo™ is the 3-D nutational vibration during tumescent infiltration, or the numbing part of the procedure. The tumescent solution, a solution laced with an anesthetic called Lidocaine and a drug called Epinephrine used to help minimize blood loss, is pumped into the area through the vibrating cannula prior to the fat removal. Because of the nutational vibration of the cannula, patients experience little to no pain and some patients even say it tickles. Another reason I like Tickle Lipo™ compared to other liposuction technologies, is that the nutational infrasonic vibration easily glides through fibrous areas allowing less fatigue for me and more comfort for the patient”.*

**How it Works:** Tickle Lipo™ differs from other methods of tumescent liposuction because the surgical cannula is activated by air pressure causing a triple 3-D movement (vibration, rotation and reciprocation), referred to as Nutation. With Tickle Lipo's™ patented technique the cannula provides Turbo Infiltration of the tumescent solution -- 25% faster than other liposuction technology shortening the length of the procedure.

Turbo Infiltration is better for the patient because it means better disbursement of tumescent solution, faster numbing, less discomfort and a shorter procedure. The vibration of the Tickle Lipo™ cannula also interferes with the brain's pain receptors in the same way that scratching relieves an itch. Physicians refer to this as the GATE theory. With CAL you also have a choice from a selection of fat suctioning cannulas that better maneuver through more fibrous fat or harder to reach areas of fat, enabling precise body contouring.

#### **Benefits to the patient:**

- Procedure done while patient is awake so no general anesthesia necessary
- Bruising is lessened
- Little or no pain during procedure
- Quicker recovery time

- Results are realized almost immediately
- Precise body contouring

### **About David J. Mozersky**

Dr. Mozersky is a graduate of the University of Manitoba Medical School. After his internship at the Winnipeg General Hospital in 1965, Dr. Mozersky moved to New York and began a five year residency in General Surgery at the famed Mount Sinai hospital. In 1969 he was appointed Chief Resident. During his General Surgery training, he became interested and inspired to study Vascular Surgery, and began a fellowship in Vascular Surgery at the University of Washington in Seattle. In 1999, he founded the first free standing Varicose Vein Clinic in San Antonio. This clinic was the forerunner of the Veintec system of clinics with locations throughout Texas, in Mexico, and in Chile. In early 2009 Dr. Mozersky began training in body sculpture and other cosmetic procedures. He has received many General and Vascular Surgical honors, including certification by the American Board of General Surgery, and the American Board of Vascular surgery; Fellow of the American College of Surgeons; Fellow of the American College of Phlebology; Member Bexar County Medical Society; Distinguished member Society for Vascular Surgery; Society of University Surgeons; founding member San Antonio Vascular Society; Member America Academy of Cosmetic Surgeons; Chief of staff San Antonio Community Hospital; and authored more than 65 papers and presentations. He is a former Clinical Professor of Surgery at the University of Texas San Antonio.

### **About Tickle Liposuction:**

Tickle Lipo™ known in Europe as Nutational Infrasonic Liposuction (NIL), is the newest form of Liposuction offered in the United States. It was first introduced in Belgium by a physician who performed several Liposuction procedures per day. Liposuction procedures require a good amount of physical exertion on the part of the physician performing the procedure. Tickle Lipo™ was developed with the objective of increasing the physician's performance while decreasing the physician's effort. Unlike current liposuction techniques that utilize laser or ultrasound energy, the cannula used in Tickle Lipo™ stays cool, thus eliminating the risk of thermal injury to tissue. Additionally, the Tickle Lipo™ System includes an automatic shut off when it approaches non-fatty tissue such as skin or muscle, thereby protecting the surrounding tissue from trauma. These safety features enable the Tickle Lipo™ System to safely and more effectively remove deep fat as well as the superficial fat and create "high-definition" sculpting. The Tickle Lipo™ System offers all of the benefits of current liposuction technology without the inherent risks. Tickle Lipo™ is FDA cleared and is distributed in the United States by Medical Alliance Services, [www.cal-now.com](http://www.cal-now.com), and (866) 981-5017.
